## NeoColab\_REC\_CS23231\_DATA STRUCTURES

### REC\_DS using C\_Week 1\_COD\_Question 4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

As part of a programming assignment in a data structures course, students are required to create a program to construct a singly linked list by inserting elements at the beginning.

You are an evaluator of the course and guide the students to complete the task.

##### ***Input Format***

The first line of input consists of an integer N, which is the number of elements.

The second line consists of N space-separated integers.

##### ***Output Format***

The output prints the singly linked list elements, after inserting them at the beginning.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

78 89 34 51 67

Output: 67 51 34 89 78

### **Answer**

```
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* next;
};

// You are using GCC
typedef struct Node Node;
void insertAtFront(Node **List,int e){
    Node *newNode=(Node*)malloc(sizeof(Node));
    newNode->data=e;
    newNode->next=*List;
    *List=newNode;
}

void printList(Node *List){
    Node *position=List;
    while(position!=NULL){
        printf("%d ",position->data);
        position=position->next;
    }
    printf("\n");
}

int main(){
    struct Node* head = NULL;
    int n;
```

```
scanf("%d", &n);  
for (int i = 0; i < n; i++) {  
    int activity;  
    scanf("%d", &activity);  
    insertAtFront(&head, activity);  
}  
  
printList(head);  
struct Node* current = head;  
while (current != NULL) {  
    struct Node* temp = current;  
    current = current->next;  
    free(temp);  
}  
  
return 0;  
}
```

**Status :** Correct

**Marks :** 10/10
